

Chp 1

HTML

Hyper Text Markup Language

Definition:-

The code that is used to structure a webpage and its content is called HTML code.

★ The 1st version of HTML was written by Tim Berners-Lee in 1993.

★ There are 5 versions of HTML.

(i) HTML 1.0 released in 1993

(ii) HTML 2.0 released in 1995

(iii) HTML 3.0 released in 1997

(iv) HTML 4.0 released in 1999

(v) Latest version HTML 5.0 in 2014

★ HTML is a standard markup language used to create webpages.

★ We use HTML tags to create webpages. With understanding of these tags and how to put them, we can create a webpage.

Example:-

opening tag **<P>** content Saadi's Coding Quest **</P>** closing tag.
HTML Element

Difference b/w HTML, CSS & JS

HTML:- HTML is a markup language which is used to create webpages.
Basic structure

CSS:- CSS is a computer language which is used for designing purpose.

JS:- Javascript is a scripting language that is used to program logic for the page layout.

Editor:-

We can use any text editor. Some people use Notepad but I prefer VS code because it is light weight, open source and easy to use.

Extension:- (save first file of HTML)

We use .html to save any HTML file. Write it in front of your name i.e. saadi.html.
